(51) Int. Cl.⁸ E04F15/00, E04F15/024

PURPOSE: To prevent a screw part from moving around, by leveling a floor by means of adjusting support bolts with screws for leveling and screwing a fastening member from the upper part of the bolt to unify.

CONSTITUTION: A floor member 1 fitted with nut tubes 5, level adjusting support bolts 6 with a screw at the four corners of the floor 1 is laid on a concrete floor 3. And the front edge of a driver or the like is inserted into the upper notch 8 of the level adjusting support bolt 6 with a screw from the upper part of the floor member 1 to rotate the level adjusting support bolt 6 to adjust the floor member 1. Next, a fastening member 9 against loosening is screwed to fix the level adjusting support bolts 6 with a screw against the nut tube 5. In this way, the nut tube 5 and the level adjusting support bolts 6 with a screw are united with the floor member 1 to increase the unified strength and vibration proof ability with the floor member 1.
